Ventura, CA 93002

PROJECT DESCRIPTION:

Union Engineering, on behalf of Ventura County Flood Control Department, proposes to discharge treated groundwater from dewatering wells to the Ventura River at the Santa Ana bridge, in Oak View, California. The groundwater is generated from dewatering activities necessary to excavate, construct, and backfill bridge pier extensions and a finger dike.

The proposed treatment system consists of a desilting basin as required to reduce turbidity and settleable solids at the outfall.

VOLUME AND DESCRIPTION OF DISCHARGE:

Up to 0.72 million gallons per day (mgd) of treated wastewater will be discharged to the Ventura River at the Santa Ana bridge, in Oak View (Latitude 34°23'56" and Longitude 119°18'27"). The discharge flows from the Ventura River to the Pacific Ocean, both waters of the United States.

FREQUENCY OF DISCHARGE:

The discharge is continuous and is expected to last for approximately six weeks.

REUSE OF WATER:

Based on the geography of the site and the nature of the project, there are no feasible reuse options, therefore the treated water will be discharged to the river.
